

Hand and Arm Protection Survey (HAAPS)

Drawing from over 20 years of experience, we realise that each company has its own set of needs and way of working. This means that every Unigloves HAAPS is unique and provides a bespoke safety solution for each customer.

What does it mean?

The Unigloves HAAPS is our personal service to help companies choose the best hand and arm protection solution to improve safety, productivity and cost performance. There is no charge and no obligation for this service, our aim is to receive your feedback so we can provide you with the best solution.

How does it happen?

Our hand protection experts will visit your site and conduct a survey on work areas that require hand and arm protection.

The data gathered will include the frequency of use, conditions of use, materials in contact, user feedback, typical working temperatures etc.

The captured data is entered into the Unigloves HAAPS System, which recommends, through a comprehensive report, the optimal glove solution for the assessed work areas.

Safety and compliance

This data-driven approach leads to improved working practices and thus greater worker protection and safety to ensure your compliance with safety regulations.

The benefits to you

-  The HAAPS is free, with no obligation
-  Potential injury reduction
-  Reduced cost of hand protection
-  Professional risk management advice
-  Regulatory compliance
-  An increase in safety awareness and workers' motivation

Please [get in touch](#) and one of our hand protection experts will be happy to evaluate how the Unigloves HAAPS System can benefit your business.
